

Prior Authorization Suite

Powered by  Hubble

Take authorization management out of manual mode

Big things happen for healthcare providers that replace manual authorization verification with Waystar's Prior Authorization solution platform. Very quickly, they improve revenue by hundreds of thousands or even millions of dollars. They also free up countless medical and administrative staff hours spent calling payers or checking payer websites to verify which procedures will be covered.

Authorization denial prevention automates authorization processes

Automated auth initiation and status verification. Powered by Waystar's patented Hubble technology, the Prior Authorization Suite allows staff to identify whether an authorization is required, dramatically expedites the initiation of the authorization, and automatically queries payer websites for authorization information by payer, patient, and procedure. It quickly returns the authorization status, number and expiration date in a fraction of the time manual checking takes, providing a complete end-to-end authorization experience.

Houses all the latest authorization rules from payers. Say goodbye forever to the morass of spreadsheets and notebooks that almost always contain outdated information. With a library of more than 1 million updated payer rules, users easily keep current with ever-evolving authorization requirements for different procedures.

Exception-Based Authorization Lists. Now your staff has a worklist in hand that not only shows which scheduled procedures still require authorizations, but it also pushes user alerts for at-risk accounts. Furthermore, our solution can even fax the authorization request to physicians for follow up.

Flags and Generates ABNs & Non-Coverage Notices. Finally, a Medical Necessity solution that goes beyond just Medicare. Waystar's Medical Necessity module, a component of the Prior Authorization Suite, quickly detects and flags procedures that won't be covered by Medicare or commercial payers, and generates ABNs and Notices of Non-Coverage to patients.

Minimizes Risk with Inpatient Admission Notification. Additional features automatically notify payers of inpatient admissions, even during the middle of the night and on weekends, further reducing denial risk and relieving administrative burden from staff.

SIGNIFICANTLY REDUCE DENIALS AND WRITE-OFFS | ACCELERATE CASH FLOW | INCREASE NET REVENUE | OPTIMIZE STAFF TIME | IMPROVE PATIENT SATISFACTION

How Hubble makes RCM smarter

Hospital information systems are good at managing patient data. But imagine a system that can also automatically retrieve and present authorization status on every procedure. Or discover which claims are going to be paid or denied and the reasons for denial. Or wrap up a patient registration with an accurate estimate of what the patient will owe. Those are just some of the highly manual tasks that Hubble can automate within widely-used HIS and Revenue Cycle workflow systems.

Meet Hubble, Waystar's AI + RPA platform that intelligently automates authorization management

It's highly intelligent. It never stops working. Waystar's Hubble technology breaks records and chains for Patient Access departments trapped in a mire of payer red tape. Hubble's advanced artificial intelligence and robotic process automation platform takes the revenue cycle to the next level by gathering real-time information from your health information system and payer websites in order to automate the entire authorization process: from verification, to submission, statusing, and ultimate retrieval of complete authorization details. Hubble grows smarter and faster with every exchange, allowing your staff to do a lot more with less, while reducing denial risk and write-offs.

Proprietary Intelligence

- Removes most authorization tasks from manual intervention
- Credentialed access to 300+ payer portals in states across the country
- Patented technology retrieves authorization status on countless procedures in minutes—more than manual efforts could obtain in a year

Unmatched Technology

- Scales to accommodate large health system needs
- Easily integrates with most major HIS and Revenue Cycle systems
- Queries and retrieves data from multiple sources to bring back complete answers

Proven Experience

- A portfolio of recognized and referenceable customers
- More experience obtaining and interpreting authorization data than any other vendor
- Revenue cycle management solutions in active use at 900+ hospitals around the country
